To the Teacher

The *Intermediate Workbook* has been specifically designed to accompany *The New Oxford Picture Dictionary*. It is suitable for students of English as a Second Language at low through high-intermediate levels.

The main purpose of the *Workbook* is to provide practice with and reinforcement of the Dictionary vocabulary. Naturally, the teacher should introduce and clarify the vocabulary before related *Workbook* pages are attempted.

A variety of uses can be made of individual exercises. For example, a fill-in-the-blank exercise may stress vocabulary retention, but it may also be a good reading exercise or a good lesson on the use of articles. Many of the exercises in the *Workbook* are also valuable for stimulating discussion.

The units of the *Workbook* are organized sequentially; however, the units do not need to be taught in their specific order. For this reason, bold numbers in the exercise instructions indicate that vocabulary from a previous Dictionary page is being reviewed.

Each exercise is marked for level of difficulty to help teachers select exercises suited to the particular needs of their students. The key at the bottom of the page explains this coding. Blue ink is used to indicate sample answers throughout the *Workbook*. This convention should be explained to the students initially and thereafter it should be evident to them.

4 Buying a Car

Read the following paragraph and answer the questions.

When you shop for a car, you must check to see that it drives well. But, in addition to this, you should make sure that the car is safe and comfortable on the inside. For example, find out if the instruments on the dashboard are easy to read and well lit at night. Make sure the glove compartment is large enough for your needs. Check to see that you can adjust the driver's seat so that the steering wheel is not too high or too low. Be sure to sit in the seats long enough to know that they are comfortable, and make sure the seat belts are easy to fasten and unfasten. It is a good idea to check the door locks on all the doors, and if you often drive children, it might be good to get a car with "child-proof" door locks on the back doors. Take the car on a test drive and see that the turn signal lights, emergency brake, and indicator lights work. Check to see that there are enough vents if you live in a hot area and need air conditioning. It's better to spend a little time checking your car before you buy it than to be sorry afterward.

1. Name two things to check that have to do with comfort.

2. Name three things to check that have to do with safety.

3. What do you suppose "child-proof" door locks mean?

4. Why might it be bad if the steering wheel is too high? Too low?

5. Who needs to check the vents carefully?

3. _____ Lisa wants to get more exercise. A friend recommended that she ride a bike several times a week. She's looking for a good buy—she doesn't have much money.
4. _____ Dave just got a new job in a city fifteen miles away. He doesn't have enough money for a car. He needs a cheap, fast way to get to work.
5. _____ Jerry is fourteen years old, and his parents are looking for a strong bike that he can use on hilly dirt roads.
6. _____ Sandy is six years old and has never had a bike before. Her parents are looking for a safe bike for Sandy to ride.

2 Bicycle Care and Safety

- Read the following paragraphs and answer the questions.

Here are some things that everyone should know about bike care and safety. First of all, bicycles should be kept in good condition and well-equipped. For example, be sure that the brakes work well. If you have hand brakes, check them often. Also, be sure to check for flat tires or tires that are losing air. Always carry a hand pump with you. Otherwise, you might have to walk a long distance! You may ruin your wheels if you ride with a flat tire. All bikes should have horns for emergency situations, and, of course, all bikes should have reflectors for nighttime riding. You can never be sure when you will have to ride your bike, so it's best to be prepared. Be sure that your chain is covered, and, to be safe, always tie the bottom of your pants leg if you're wearing pants.

When you ride your bike, never carry passengers on the handlebars or fenders because this is dangerous. Always pedal your bike with the traffic and never against it. Wear a helmet and carry a good lock and cable. Always lock your bike in a bike stand if there is one nearby. Do these things and you will enjoy using your bicycle.

1. Name three things to carry with you.

2. Why are reflectors a good idea?

3. Name two things to check for.

4. Why should chains be covered?

5. Why are passengers on the handlebars or fenders dangerous?

6. Why is it a good idea to wear a helmet?

1 From Hot Air to Jets

- There are nineteen words from page 57 in this reading. Find and underline them.

Since early times, man has been interested in flight. In the 11th and 12th centuries, men wrote of their attempts to tie wings to their bodies in order to fly. In the 16th century, Leonardo da Vinci made careful studies of birds and then drew pictures of flying machines that went straight up into the air. They looked a lot like modern helicopters complete with rotors! The first real flight was in a hot air balloon in 1783. Later, balloons with propellers were invented, called blimps. In the 1890s an aircraft was developed that looked very much like an airplane, but without an engine. It was the first glider. The first manned flight in a propeller plane, however, was in 1903. This plane, developed and flown by the Wright Brothers, had all six essential parts of an airplane—a fuselage,

wings, tail, rudder, an engine, and wheels. Today these propeller planes seem very old-fashioned. Jet engines were soon to follow, however. Developed in the 18th century, the jet engine was first thought of for use on an aircraft in 1908. Now jet planes are very common.

Today, aircraft are commonly used for both sport and transportation. Hot air balloons are used as a form of recreation, and many daredevils enjoy the thrill of flying in hang gliders. It is not unusual to see business people in their own private jets. From busy airport terminal buildings, we see control towers directing runway traffic, huge cargo planes unloading at their cargo areas, and passenger planes on their way to huge hangars. Think how far air travel has come!

2 Just the Facts, Please

- Now, on another sheet of paper, answer these questions.

1. How did man try to fly in the 11th and 12th centuries?
2. How did Leonardo da Vinci try to find out about the art of flying?
3. When was the first real flight? What kind of aircraft was it?
4. What is a blimp?
5. What is the main difference between a glider and an airplane?
6. What did the Wright Brothers do?
7. What are the six necessary parts of an airplane?
8. When were jet engines developed?

3 Research

- Find out more about the six main parts of an airplane in a larger dictionary. Write an eight-sentence paragraph starting with this: *Most airplanes have six main parts.* Each of the next six sentences should mention a part and give a definition. Use words like *first*, *second*, etc. The eighth sentence will be your conclusion.

1 That's Not True!

4 Flower Names

- Underline all the flower names in the reading below. (There are fifteen.)

Did you ever wonder how flowers got their names? Many flowers were named after people. For example, the gardenia was named after Dr. Alex Garden, a botanist from Scotland. Dr. J.R. Poinsett, from the United States, developed the poinsettia, and the zinnia was named after a German professor of botany, Johann Zinn. Some were even named after gods, goddesses, and religious figures. The iris was named after the Greek goddess of the rainbow, Marigold originally meant Mary's gold.

Other flowers have names that simply describe them. For instance, the buttercup looks like a cup of butter, and the sunflower, of course, looks like the sun. In the English of long ago, daisy meant day's eye, and it certainly does look like an eye!

Still other flowers have names that were originally words in other languages. These words often describe the flower, too. A good example is the tulip. This comes from the Turkish word "tulbend," which means turban. It does look like a Turk's hat! Another one is the chrysanthemum, which comes from Greek words that mean "gold flower." Petunias get their name from a South American Indian word, "petun," which means tobacco. The petunia flower looks a lot like the tobacco flower.

Some flower names have to do with the use we have for it. Crocus comes from the Greek word for saffron, for instance, and we get this expensive spice from the stamens of the crocus! Other foreign names are just translations into English—lily and violet, from Latin, and hyacinth, from Greek.

It's hard to believe how much we can learn from the names of flowers!

5 A Bunch of Flower Questions

10. one claw/no antennas (1)

11. no antennas/no claws/no tentacles/no shell (2)

3 Seafood Tastes

- Get together with a partner and interview each other about what kind of seafood each of you particularly like and dislike. Take notes and write a one-paragraph report. Read it to the class.

1 Bug Problems

- Many people dislike having insects and spiders around them.
- They buy insecticides to get rid of them. Read these labels to decide which bug the insecticide will best kill. Write your answers on another sheet of paper.

1. Spray monthly. Keep them from eating all the wooden parts of your house!
2. Hang these strips in your closet to protect your woolen clothes.
3. Apply the powder along the baseboards in your kitchen and bathroom.
4. Spray the nest directly from at least 12 feet and leave immediately.
5. Spray the garden area about half an hour before having your party.
6. Put these buttons in kitchen cabinets—especially near sugar and sweets.
7. Spray garbage cans weekly to prevent attracting them.

2 The Collector

- Although some people want to get rid of bugs, others like to collect them! Read the following essay and answer the questions in complete sentences on another sheet of paper.
-

Marcia is a biology teacher who collects insects and spiders. She has a beautiful collection of butterflies and moths. She loves to show her students how the most beautiful butterflies and moths come from cocoons made by the ugliest caterpillars. Last summer, Marcia added some hard-to-find beetles and dragonflies to her collection. They are not like fireflies, which light up to show you where they are, or crickets, which make noise! This year she wants to find some large mantises. She'll put one in her collection and the rest in her yard to keep garden pests away.

It seems that some insects do not like to be collected, however. Last week two wasps and a bee stung her! Mosquitos and flies don't like her either! Although some insects, like the grasshopper, look dangerous, they aren't. A few insects, on the other hand, can be really dangerous. When Marcia hunts scorpions, centipedes, and certain spiders, she is extremely careful not to allow them to sting or bite her! Actually, spiders, scorpions, and centipedes are not insects because they have more than six legs. Most people don't worry about the difference, though, and call everything she collects a bug!

1. How many legs does an insect have?
2. Which bugs are not insects?
3. Which insect is good in the garden?
4. Which bugs can be dangerous?
5. What does she like to show her class?
6. What is the common word for what Marcia collects?
7. Which insects are easy to find and why?

1 Groupings

- There are many ways to group birds. On another sheet of paper, list birds from page 64 under each of the categories. You may use a bird on several lists.

Birds for Food Pets Beautiful Birds Birds of Prey

2 All Wrong

- The following statements are not correct. Correct them by drawing a line through the name of the bird and writing the correct bird's name on the line. There may be more than one correct answer, and you may use some birds more than once.

1. The flamingo lives in a very cold place. *penguin*
2. The parakeet is good to eat. _____
3. A swan can talk. _____
4. The hummingbird is the largest living bird. _____
5. The crow has a long neck. _____
6. The sparrow has a beautiful tail. _____
7. The crow is pink. _____
8. The pigeon is a very fast runner. _____
9. The robin makes holes in wood. _____
10. The stork is all red. _____

3 Corrections

- Look at the sentences in exercise 2 again. Now correct them on the lines below. The first two are done. Notice how the two examples are different. Your teacher will help you see the difference.

1. *The flamingo doesn't live in a very cold place, but the penguin does.*
2. *The parakeet isn't good to eat, but a chicken is.*

-

5 Places of Origin

- Look at these maps that show where various animals live.
- Then fill in the blanks in the reading on the opposite page.

Australia	Africa	North America	Sumatra/Borneo	China	South America
					
					
					
					
					
					
					
					

Some animals of the world can be found in special places only. For example, if you want to see a _____, a cousin to the camel, you must travel to the Andes in South America. On the other hand, if you are interested in the _____ or the _____, Australia is the place for you. Many animal lovers tour Africa to find _____, _____, _____, and _____. And of those, the _____ is nearly extinct. North America is the only place to find the American _____, or what some people call the buffalo. They cannot be found in the wild anymore, and are only found on special reserves. The nearly extinct _____ bear is also native to North America, as are the smaller animals like the _____, _____, _____, and _____. Sumatra and Borneo are the places to go to find the _____, and the bear-like _____ is only seen in China. If you'd like to see these unusual animals and don't have the money to explore the world, try visiting your local zoo!

8 Which Are You?

3 Extremes

Read the following paragraph. On another sheet of paper, write questions and answers based on the words that come after it.

Each of the continents of the world is extraordinary in some way. For instance, Asia has the largest land mass of 16,988,000 square miles. It also has the highest mountain range—the Himalayas, where Mount Everest stands 29,028 feet tall. Africa has the longest river, the Nile, measuring 4,145 miles long. North America lies between the two largest oceans. The Pacific holds 23.9% of the world's water, while the Atlantic has 46% of the world's water. North America also has the Mississippi, the third longest river. South America has the driest spot in the world, the Atacama desert. It's even drier than the Sahara in Africa. In addition, South America has the world's second longest river, the Amazon. Eastern Europe has the largest lake. Although it is called a sea because it is so large (143,550 square miles), the Caspian Sea is really a lake. Vostok, Antarctica, is the coldest spot on earth, with a recorded temperature of -127° F in 1960. Australia is said to have the fewest people (.3% of the world's population), even though Antarctica has even fewer because, comparatively speaking, it is not populated at all!

- | | |
|------------------------------|--|
| 1. larger/Asia or Africa? | 6. Sahara/driest? |
| 2. largest continent? | 7. Asia/square miles? |
| 3. higher/Himalayas or Alps? | 8. largest ocean? |
| 4. Caspian/lake or sea? | 9. colder/Antarctica or North America? |

1. triangle *This figure has three sides and three angles.*
2. rectangle 3. square 4. circle 5. cube 6. pyramid

3 Find One!

● With a partner, find as many examples of the words from page 79 as you can in your classroom. Compare the number of examples you found with the number found by your classmates.

1 U.S. Energy

- Look at the circle graph and write sentences describing the types of energy used in the United States.

31.5 percent of our energy comes from oil.

2 Energy

- Read the paragraphs. Answer the questions following it on another sheet of paper.

The sun is the source of all our energy. Look at the graph to see the major forms of energy in the world, and how much of our total energy we get from each of these forms in the United States.

Although it's obvious that solar power comes from the sun, is it possible that all the other energy forms depend upon the sun, too?

Oil, the most commonly used U.S. fuel, was once the plants and animals of the Earth's oceans. The sun was necessary for them to live. Today we find oil deep in the Earth and dig oil wells to pump the oil out. Huge refineries clean it, and power stations burn it so that electrical generators can transform the heat into electricity.

Coal and natural gas are also products of once-living plants and animals—in this case, land plants and animals. While we dig coal mines to get coal out of the Earth, we pipe out natural gas. Again, power plants are necessary to make electricity. Nuclear reactors, on the other hand, generate electricity from uranium, a naturally-found material on Earth.

The sun heats the Earth unevenly, so some air warms up quickly, while some stays cool. Warm air rises, and when it does cooler air moves in to fill the space the warm air left behind. We call this constant movement of air the wind. Windmills use the energy of the wind to generate electricity.

The sun also causes water to evaporate from the oceans and fall as rain on the land. Rivers develop, which then form waterfalls. Dams generate hydroelectric power from these waterfalls.

In its center, our Earth is very, very hot. Water underground can be heated to produce steam. Geysers are places where this steam and water escape above ground in a giant spray. Man can also use this thermal energy as a power source.

So, directly or indirectly, the sun is the source of almost all our energy!

1. What is the third most important fuel in the United States?
2. What three forms of energy were once living things? How do they differ?
3. What do refineries do?
4. How do we get electricity from oil, gas, and coal?
5. What three forms of energy are not commonly used in the United States?
6. What do you think thermal energy is?
7. What do you think hydroelectric power is?

3 Energy Problems

- What is the main source of energy in your native country?
 - Where do you get this fuel? Does it cause pollution problems?

4 Yellowstone National Park

Read the following article. On another sheet of paper, ask questions about the article using the words that follow it. Have a partner answer your questions.

Yellowstone National Park, the first national park in the United States, was established in 1872. It offers a wide variety of recreation.

Yellowstone lies on a wide plateau in the Rocky Mountains of Wyoming, Montana, and Idaho. For those who like scenic hiking, it has deep canyons and overlooking cliffs. The Grand Canyon of the Yellowstone is a sight to see, and hikers particularly like the South Rim Trail along the Canyon. Backpackers are attracted to the hundreds of trails, and for those who enjoy mountain climbing, high mountains, such as Joseph Peak (10,497 feet high) and Parker Peak (10,203 feet high), surround the plateau.

Rafters come to the raging rivers and streams for excitement, and many fishermen are found on the large lakes and rivers. In fact, the fishing is so good that they've even named a bridge Fishing Bridge. Photographers snap thousands of pictures of the beautiful waterfalls, like the Upper Falls of the Yellowstone River, which is 109 feet tall. Thousands of tourists camp in the woods every summer and more come just to sightsee and picnic.

In order to make your trip more enjoyable, you should contact a park ranger after getting there. He or she can tell you the rules and how to make the most of your trip. For instance, campfires are allowed in camping areas only, and you may not picnic outside of picnic areas. Register before going on any backpacking or hiking trips, and always carry a compass. By cooperating with the rangers, you can help make sure that people will always be able to enjoy the wonders of Yellowstone.

2 Individual Sports and the Olympics

●○ Read the following paragraphs. Underline all of the words from page 94 that you find. Then, on another sheet of paper, categorize the sports you find into those that are played with another person and those that aren't.

Men and women have participated in individual sports for thousands of years. In 770 B.C., the ancient Greeks organized running events every four years to honor the god Zeus. Over the next several hundred years other competitions, such as boxing, wrestling, and chariot racing, were added to the running events. These ancient Olympics were stopped in the fourth century A.D. by the Roman emperor Theodosius.

The modern Olympics started up again in 1896 in Athens, Greece, and, except for times of world war, has continued every four years in different cities since then. The first few modern Olympics continued track and field events, boxing, and wrestling, but chariot racing was no longer a part of the competition! In addition, sports like gymnastics and lawn tennis (later to become modern tennis) were included. Although popular individual sports like Ping-Pong, racquetball, bowling, golf, and handball have never joined the Olympic schedule, the first winter Olympics in 1924 added ice skating and cross-country skiing. Other sports have been included through the years. Horse racing, although similar to the ancient sport of chariot racing, is not a modern Olympic event. Whether part of the Olympics or not, individual sports competition has certainly remained popular!

3 Olympic Questions

●○ Answer the following questions on another sheet of paper.

1. Which three sports were part of both the ancient and modern Olympics?
Which two are listed in the Dictionary?
2. Why do you think skiing and ice skating were not part of the ancient Olympics?

If so, who? _____ What does he/she play? _____

Who is your favorite musician? _____

What does he/she play? _____

2 Types of Musical Instruments

- Read the following essay and write the correct word after the definitions. There may be more than one good answer.

Musical instruments are usually classified by how they produce sound. For instance, musicians make sound on stringed instruments by hitting, plucking, or drawing a bow across tightly stretched strings. The piano is an example of the first method. Those instruments that are plucked can be plucked by the fingers, as with the harp, or with either the fingers or a pick, as with the guitar, ukelele, banjo, and mandolin. Bows are used on instruments like the violin, viola, cello, and the bass, although sometimes these can be plucked, too.

In wind instruments, a vibrating column of air makes the sound. Sometimes the air is put into motion mechanically, as with the organ, but usually the musician blows into the instrument. The wind instruments can be further classified into woodwinds and brass. The woodwinds were originally made of wood, and most have reeds, which help to form the sound. The clarinet has a single reed, while the oboe and the bassoon have double reeds. The flute is an exception—it has no reed.

The brass instruments were originally made of brass, and the musician's lips take the place of reeds. They all have mouthpieces. The French horn has a funnel-shaped mouthpiece, while the trombone, trumpet, and tuba have cup-shaped mouthpieces. The saxophone is the exception here because, although it has a mouthpiece, there is a reed in the mouthpiece.

Percussion instruments produce sounds when they are hit together or with a tool. They are made of wood, like the xylophone, or metal, like the cymbals, or tightly stretched skin, like the various types of drums. The tambourine is a combination of the last two types. It's interesting to see how many ways we can make musical sounds.

1. A stringed instrument played by hitting the strings _____
2. A stringed instrument played by either plucking or bowing _____
3. A wind instrument which is not blown into _____
4. A woodwind without a reed _____
5. A brass instrument with a reed _____
6. A percussion instrument made of metal and skin _____
